System failure affecting aircraft configuration, controllability and/or flying qualities	25			Aircraft systems maintenance, checks, design
Convective weather / turbulence / windshear / icing conditions encounter conditions during take-off risk	84			Weather forecast, flight plan, navigation aids, Tower guidance
Risk of dangerous occurences appeared during take-off roll	85			Pilot training, airport safety program
Convective weather / turbulence / strong wind encounter conditions during take-off	86			Weather monitoring, Tower guidance, pilot training
System failure affecting the operation of primary instruments / displays or standby instruments	26			Aircraft systems maintenance, checks, design

Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.	DEFENCES/CONTROLS
Contaminated Runway	39			Runway state monitoring
Takeoff from taxiway	90			Pilot training, Tower guidance, sterile
				cockpit
Runway confusion	91			Pilot training, Tower guidance, sterile
				cockpit
Inappropriate intersection takeoff	92			Pilot training, Tower guidance, sterile
or takeoff from incorrect				cockpit
intersection				
Line-up events	93			Towe guidance, pilot training
Rejected takeoff (whether	48			Aircraft systems maintenance, checks,
initiated below or above 100 kt)				design
(+) due to an aircraft system				
failure including engine				
Aircraft swerve / lateral excursion	96			Pilot traning, weather monitoring, fly-by-
during takeoff roll				wire/light
Cautions / warnings (genuine or	46			Avionics callibration, maintenance, design
spurious) that may lead to a low-				
speed or high-speed rejected				
take-off				
Other cockpit effects /	98			Avionics callibration, maintenance, design
malfunctions (genuine or				
spurious) occurring during takeoff				
roll				
Runway incursion	99			Airport security
Wild life incursion	100			Wildlife deterrence program
Bird strike	34			Wildlife deterrence program
Convective weather / turbulence	102			Weather monitoring, Tower guidance, pilot
/ windshear / crosswind				training
encounter during approach and				
landing				
Crew is incapable in result of	43			Seat design, pilot physical tests
shock related to hard landing				
Wild life incursion	100			Wildlife deterrence program
Convective weather / heavy rain	105			Weather monitoring, Tower guidance, pilot
				training
Severe structural failure of	49			Fail-safe design
aircraft or / and its critical				
systems resulted from design				
load exceeding during touchdown				
Missed approach execution	44			Weather monitoring, tower guidance, pilot
necessary after prolonged flight				training

Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.	DEFENCES/CONTROLS
due to e. g. extreme weather				
AOA prevents missed approach	14			Pilot training
Tire burst	80			Tire maintenance, replacement, runway
				state monitoring
Contaminated Runway	39			Runway state monitoring
Bird strike	34			Wildlife deterrence program
System failure affecting the	26			
operation of primary instruments				
/ displays or standby instruments				
Convective weather encounter	18			Weather monitoring, Flight plan,
				ATM/tower guidance, pilot training
Continued unstabilized approach	13			Pilot training, aircraft tracking, tower
(failure to comply with go-around				guidance, navigational aids
criteria and policy)				
Tailwind or crosswind landing	116			Weather monitoring, Tower guidance, pilot
with tailwind and/or crosswind				training
component(s) in excess of				
applicable limit(s), either				
intentionally or unknowingly				
Hard landing	47			Pilot training, ILS, Tower guidance
Bounced landing	118			Pilot training, aircraft design
Deep (long) landing	119			Pilot training, ILS, Tower guidance
Temporary loss of directional	120			Pilot training, aircraft design
control during rollout				
System failures that may affect	15			System maintenance, checks, design
braking devices (ground spoilers,				
brakes / autobrake, thrust				
reversers)				
System failures that may affect	122			System maintenance, checks, design
directional control (brakes, thrust				
reversers, nose wheel steering)				
Lack of adherence to SOP for	123			Pilot training, Tower guidance
take-off procedure in terms of				
maintaining adequate separation				
on the RWY.				
Flaws in manufacturer quality	124			POA certificate, quality checks at factory
control process - taxiing related				and customer level
control system (e.g. Brake failure)				
Lack of adherence to SOP for GND	125			Tower guidance, aircraft training, pilot
movements in terms of				traning

Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.	DEFENCES/CONTROLS
marshalling procedure				
Lack of adherence to SOP for GND movements in terms of flight crew - ground crew comunication.	126			Tower guidance, aircraft training, pilot traning
Lack of adherence to SOP for GND movements in terms of clearance providing by the controller.	127			Tower guidance, aircraft training, pilot traning
Flaws in ground equipment maintenance process Vehicle driver / equipment operator / ground agent tiredness - Inadequate workload distribution	128			Maintenance operation organisation, audits, staff training Work organisation, state labor regulations, unions, labor audits/inspections
Flaws in vehicle driver / equipment operator / ground agent requirements definition process and/or training methodology	130			Manuals, state regulations, audits
		Inadvertent deviation from cleared taxi route	131	Tower guidance, aircraft training, pilot traning
		Lack of English proficiency	132	Pilot qulification tests, training programmes, certificates
		Incorrect or confusing / misleading ATC instructions	133	ATC training
		Use of non-standard phraseology by pilot and/or controller	134	Air staff and ATM staff training
		Lack of adherence to emergency procedures - RWY collision avoidance	135	Pilot training, tower ATM training
		Flaws in aircraft system maintenance process definition - stickshaker	136	Process evaluation, multistage acceptance, voluntary reporting
		Traffic controller tiredness - Inadequate workload distribution	137	State labor regulations, labor unions, ATM work organisation
		Lack of adherence to SOP for GND movements. Poor execution of parking / docking	138	Pilot traning, tower guidance, aircraft tracking

Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.	DEFENCES/CONTROLS

23				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Components of Wing control surface system.	288

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
24				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Communication equipment systems and components.	271
25				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Autothrottle system in the engine	316
26				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - APU systems and / or components	464
27				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Aircraft door system and / or components	391
28				Inadequate aircraft de-icing / anti-icing	180
29				High energy RTO rate is an indicator of improper Operator's policy for T/O operations.	211
30				Gross error in takeoff weight entry and/or in V1 / VR speeds assessment	179
31				Flaws in pilot requirements definition process and/or training methodology	168
32				Flaws in manufacturer quality control process - Hydraulic system components.	386
33				Flaws in manufacturer quality control process - Power supply system components	238
34				Flaws in manufacturer quality control process - Pneumatic system componentss.	373
35				Flaws in manufacturer quality control process - Onboard navigational systems and components.	493
36				Flaws in manufacturer quality control process - Landing gear components.	376
37				Flaws in manufacturer quality control process - FMS subsystem and components (autopilot incl.)	306
38				Flaws in manufacturer quality control process - Fire warning system	479
39				Flaws in manufacturer quality control process - Fire extinguishing system components	482
40				Flaws in manufacturer quality control process - Fire detection system components	476
41				Flaws in manufacturer quality control process - Drag control system componentss.	378
42				Flaws in manufacturer quality control process - Components of Wing control surface system.	314
43				Flaws in manufacturer quality control process - Communication equipment systems and components.	272

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
44				Flaws in manufacturer quality control process - Autothrottle system in the engine.	324
45				Flaws in manufacturer quality control process - APU systems and / or components	465
46				Flaws in maintenance technician / airworthiness specialist requirements definition process and/or training methodology	149
47				Flaws in aircraft system maintenance process definition - Power supply system components	387
48				Flaws in aircraft system maintenance process definition - Pneumatic system components.	374
49				Flaws in aircraft system maintenance process definition - other critical flight instruments and systems.	383
50				Flaws in aircraft system maintenance process definition - Onboard navigational systems and components	491
51				Flaws in aircraft system maintenance process definition - marshalling/rolling/taxiing control related system and components (incl. brake).	366
52				Flaws in aircraft system maintenance process definition - Landing gear components.	377
53				Flaws in aircraft system maintenance process definition - Hydraulic System	334
54				Flaws in aircraft system maintenance process definition - FMS subsystems and components (autopilot incl.)	410
55				Flaws in aircraft system maintenance process definition - Fire warning system	477
56				Flaws in aircraft system maintenance process definition - Fire extinguishing system components	481
57				Flaws in aircraft system maintenance process definition - Fire detection system components	474
58				Flaws in aircraft system maintenance process definition - Drag control system components.	379
59				Flaws in aircraft system maintenance process definition - Components of Wing control surface system.	311
60				Flaws in aircraft system maintenance process definition - Communication equipment systems and components.	270
61				Flaws in aircraft system maintenance process definition - Autothrottle system in the engine.	325
62				Flaws in aircraft system maintenance process definition - APU systems and / or components	466
101	ESD2	Wildlife incursion	5	Use of non-standard phraseology by pilot and/or controller	134
102		System failure affecting aircraft configuration, controllability and/or flying qualities	25	Traffic controller tiredness - Inadequate workload distribution	137

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
103		Risk of dangerous occurences appeared during take-off roll	85	Taxiing without clearance	367
104		Lack of adherence to SOP for GND movements in terms of clearance providing by the controller.	127	Takeoff without clearance	157
105		Emergency landing	8	Poor application of T/O & RTO procedure, computation of T/O parameters	260
106		Convective weather / turbulence / windshear or crosswind conditions during take-off	32	Poor application of T/O & RTO procedure, braking initiation sequence	199
107		Convective weather - heavy rain resulted with wet RWY surface	75	Poor application of T/O & RTO procedure, adherence to SOP, criteria for STOP decision	207
108		Contaminated Runway	39	Poor application of T/O & RTO procedure, adherence to SOP and AFM limitations	384
109		Bird strike	34	Pilot tiredness - Inadequate workload distribution	167
110				Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
111				Late rejected takeoff decision / initiation	368
112				Landing without clearance	158
113				Lack of or poor communication quality	146
114				Lack of English proficiency	132
115				Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151
116				Lack of adherence to the main CRM rules	264
117				Lack of adherence to SOP in terms of communication between ATC and pilot / vehicle driver	148
118				Lack of adherence to SOP for take-off procedure in terms of time limitation for take-off preparation.	404
119				Lack of adherence to SOP for GND movements. Lack of awareness of own position on the airsite and airport topology.	142
120				Lack of adherence to SOP for GND movements. Lack of awareness of other traffic movements through listening of ATC communications	140
121				Lack of adherence to SOP for GND movements. Lack of awareness in terms of sufficient separation / clearence	143
122				Lack of adherence to SOP for GND movements. Lack of awareness in terms of current situation on the airsite or / and aircraft / vehicle proximity	144
123				Lack of adherence to SARPs included in ICAO Annex 14 in terms of airport fence integrity monitoring	401
124				Lack of adherence to Rules of the Air - runway used for alternating take-offs and landings	160
125				Lack of adherence to Rules of the Air - adherence to Controller clearance	296

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
126				Lack of adherence to ICAO Annex 14 SARPs. Poor or inefficient bird hazard reduction procedure	162
127				Lack of adherence to ICAO Annex 14 SARPs in terms of RWY mainternance - presence of contaminations.	216
128				Inefficient / confusing TWR traffic control procedures, inefficient management of hot spots	139
129				Incorrect or confusing / misleading ATC instructions	133
130				Inadequate maintenance of RWY. Lack of adherence to ICAO Annex 14 in terms of RWY surface condition. Snow / ice presence / or runway surface friction rate below minimum	203
131				High energy RTO rate is an indicator of improper Operator's policy for T/O operations.	211
132				Gross error in takeoff weight entry and/or in V1 / VR speeds assessment	179
133				Flaws in traffic controller requirements definition process and/or training methodology	145
134				Flaws in pilot requirements definition process and/or training methodology	168
135				Flaws in maintenance technician / airworthiness specialist requirements definition process and/or training methodology	149
136				Flaws in CRM training procedures	263
137				Flaws in Airspace and Air Traffic planning procedures design process	323
138				Flaws in airport capacity management process	400
139				Flaws in aircraft system maintenance process definition - marshalling/rolling/taxiing control related system and components (incl. brake).	366
201	ESD3	System failure affecting aircraft configuration, controllability and/or flying qualities	25	Poor application of T/O & RTO procedure, use of MET / ATIS information, aircraft handling	200
202		Convective weather / turbulence / windshear or crosswind conditions during take-off	32	Poor application of T/O & RTO procedure, computation of T/O parameters	260
203		Convective weather - heavy rain resulted with wet RWY surface	75	Poor application of T/O & RTO procedure, braking initiation sequence	199
204		Contaminated Runway	39	Poor application of T/O & RTO procedure, aircraft handling	388
205		Adverse weather in terms of heavy rain or icing conditions resulted with decreased RWY surface friction rate	45	Poor application of T/O & RTO procedure, adherence to SOP, criteria for STOP decision	207
206				Poor application of T/O & RTO procedure, adherence to SOP and AFM limitations	384
207				Pilot tiredness - Inadequate workload distribution	167

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
208				Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
209				Late rejected takeoff decision / initiation	368
210				Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151
211				Lack of adherence to ICAO Annex 14 SARPs in terms of RWY mainternance - presence of contaminations.	216
212				Lack of adherence to AFM limitations for Take- off	202
213				Inadequate maintenance of RWY. Lack of adherence to ICAO Annex 14 in terms of RWY surface condition. Snow / ice presence / or runway surface friction rate below minimum	203
214				High energy RTO rate is an indicator of improper Operator's policy for T/O operations.	211
215				Gross error in takeoff weight entry and/or in V1 / VR speeds assessment	179
216				Flaws in pilot requirements definition process and/or training methodology	168
217				Flaws in maintenance technician / airworthiness specialist requirements definition process and/or training methodology	149
218				Flaws in aircraft system maintenance process definition - marshalling/rolling/taxiing control related system and components (incl. brake).	366
219				Failure to remember / assess crosswind component limit for prevailing runway condition	418
301	ESD4	Tire burst	80	Poor application of T/O & RTO procedure, failure recognition and preparedness	209
302		System failure affecting aircraft configuration, controllability and/or flying qualities	25	Poor application of T/O & RTO procedure, computation of T/O parameters	260
303		Convective weather - heavy rain resulted with wet RWY surface	75	Poor application of T/O & RTO procedure, braking initiation sequence	199
304		Contaminated Runway	39	Poor application of T/O & RTO procedure, aircraft handling	388
305				Poor application of T/O & RTO procedure, adherence to SOP, criteria for STOP decision	207
306				Pilot tiredness - Inadequate workload distribution	167
307				Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
308				Lack of adherence to ICAO Annex 14 SARPs in terms of RWY mainternance - presence of contaminations.	216

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
309				Inadequate maintenance of RWY. Lack of adherence to ICAO Annex 14 in terms of RWY surface condition. Snow / ice presence / or runway surface friction rate below minimum	203
310				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - marshalling/rolling/taxiing control related system and components (incl. brake)	196
311				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Landing gear components	358
312				High energy RTO rate is an indicator of improper Operator's policy for T/O operations.	211
313				Gross error in takeoff weight entry and/or in V1 / VR speeds assessment	179
314				Flaws in pilot requirements definition process and/or training methodology	168
315				Flaws in manufacturer quality control process - marshalling/rolling/taxiing control related system and components (incl. brake).	365

1011				Inadequate maintenance of fire vulnerable aircraft parts or components	353
1012				Inadequate effectivenes of fire extinguishing system	221
1013				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements in terms of fire resistance	354
1014				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Hydraulic system components	333
1015				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Fuel system components	352
1016				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Fire warning system	478
1017				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Fire extinguishing system components	480
1018				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Fire deection system components	475
1019				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Engine systems and / or components	454
1020				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Electrical / wiring system components	467

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1021				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - APU systems and / or components	464
1022				Flaws in pilot requirements definition process and/or training methodology	168
1023				Flaws in manufacturer quality control process - Fire warning system	479
1024				Flaws in manufacturer quality control process - Fire extinguishing system components	482
1025				Flaws in manufacturer quality control process - Fire detection system components	476
1026				Flaws in manufacturer quality control process - Engine systems and / or components	458
1027				Flaws in manufacturer quality control process - Electrical / wiring systems components	468
1028				Flaws in manufacturer quality control process - APU systems and / or components	465
1029				Flaws in maintenance technician / airworthiness specialist requirements definition process and/or training methodology	149
1030				Flaws in aircraft system maintenance process definition - Hydraulic System	334
1031				Flaws in aircraft system maintenance process definition - Fuel system compoonents	361
1032				Flaws in aircraft system maintenance process definition - Fire warning system	477
1033				Flaws in aircraft system maintenance process definition - Fire extinguishing system components	481
1034				Flaws in aircraft system maintenance process definition - Fire detection system components	474
1035				Flaws in aircraft system maintenance process definition - Engine systems and / or components	463
1036				Flaws in aircraft system maintenance process definition - Electrical wiring System	252
1037				Flaws in aircraft system maintenance process definition - APU systems and / or components	466
1101	ESD12	System failure affecting the operation of primary instruments / displays or standby instruments	26	Use of non-standard phraseology by pilot flying (PF) and/or pilot not flying (PNF)	223
1102		Adverse weather / poor visibility conditions / darkness	6	Unintuitive and / or error prone system manual - FMS	494
1103				Pilot tiredness - Inadequate workload distribution	167
1104				Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
1105				Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1106				Lack of adherence to the SOP in terms of critical maneuvre execution	226
1107				Lack of adherence to the SOP in terms of critical indicators cross-checking	224
1108				Lack of adherence to SOP in terms of safety best practices	273
1109				Lack of adherence to SOP in terms of AFM limitations	227
1110				Lack of adherence to SARPs included in Annex 14 and related documents in terms of RWY parameters and location, attitude, approach path parameters and obstacles locations (e.g. mountains).	225
1111				Lack of adherence to AFM in terms of emergency procedures - stall recovery	292
1112				Incorrect use of automation - FMS	269
1113				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - FMS subsystems and components (autopilot incl.)	299
1114				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - ADI system components	320
1115				Flaws in pilot requirements definition process and/or training methodology	168
1116				Flaws in manufacturer quality control process - ADI system components	322
1117				Flaws in maintenance technician / airworthiness specialist requirements definition process and/or training methodology	149
1118				Flaws in aircraft system maintenance process definition - ADI system components	319
1119				Excessive pitch attitude	183
1120				Excessive bank angle	184
1121				Difference indications of independent aircraft speed / altitude or attitude indicators	267
1122				Aggressive maneuvering / overcontrolling	182
1201	ESD13	Uncommanded thrust asymmetry	28	Pilot tiredness - Inadequate workload distribution	167
1202		System failure affecting the operation of primary instruments / displays or standby instruments	26	Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
1203		System failure affecting aircraft configuration, controllability and/or flying qualities	25	Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151
1204				Lack of adherence to the SOP in terms of critical indicators cross-checking	224
1205				Lack of adherence to emergency procedures - recovery from severe FCS failure	338

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1206				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Thrust reverse system in the engine.	332
1207				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Rudder components.	276
1208				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Horizontal stabilizer components.	280
1209				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - FMS subsystems and components (autopilot incl.)	299
1210				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Components of Wing control surface system.	288
1211				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Autothrottle system in the engine	316
1212				Flight below maneuvering speeds	185
1213				Flaws in pilot requirements definition process and/or training methodology	168
1214				Flaws in manufacturer quality control process - Thrust reverse system in the engine.	335
1215				Flaws in manufacturer quality control process - Rudder components.	279
1216				Flaws in manufacturer quality control process - Horizontal stabilizer components.	287
1217				Flaws in manufacturer quality control process - FMS subsystem and components (autopilot incl.)	306
1218				Flaws in manufacturer quality control process - Components of Wing control surface system.	314
1219				Flaws in manufacturer quality control process - Autothrottle system in the engine.	324
1220				Flaws in maintenance technician / airworthiness specialist requirements definition process and/or training methodology	149
1221				Flaws in aircraft system maintenance process definition - Thrust reverse system in the engine.	337
1222				Flaws in aircraft system maintenance process definition - Rudder components.	277
1223				Flaws in aircraft system maintenance process definition - Horizontal stabilizer components.	285

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1224				Flaws in aircraft system maintenance process definition - FMS subsystems and components (autopilot incl.)	410
1225				Flaws in aircraft system maintenance process definition - Components of Wing control surface system.	311
1226				Flaws in aircraft system maintenance process definition - Autothrottle system in the engine.	325
1301	ESD14	Vehicle driver / equipment operator / ground agent tiredness - Inadequate workload distribution	129	Use of non-standard phraseology by pilot and/or controller	134
1302		System failure affecting the operation of primary instruments / displays or standby instruments	26	Unintuitive and / or error prone system manual - CPCS	500
1303		System failure affecting aircraft configuration, controllability and/or flying qualities	25	Traffic controller tiredness - Inadequate workload distribution	137
1304		In-flight smoke / fumes / fire (in cockpit, cabin, cargo) events that could affect the crew ability to conduct their duties and/or the aircraft controllability	29	Pilot tiredness - Inadequate workload distribution	167
1305		Flaws in vehicle driver / equipment operator / ground agent requirements definition process and/or training methodology	130	Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
1306		Extreme turbulence encounter	19	Lack of English proficiency	132
1307		Crew incapacitation resulted from illness (e.g. food poisoning)	59	Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151
1308		Cabin pressure drop as a result of aircraft structural failure	33	Lack of adherence to the SOP in terms of critical maneuvre execution - flare	389
1309		Bird strike	34	Lack of adherence to SOP for GND movements.	141
1310		Adverse weather / poor visibility conditions / darkness	6	Lack of adherence to ICAO Annex 14 SARPs. Poor or inefficient bird hazard reduction procedure	162
1311				Lack of adherence to emergency procedures - flight deck smoke procedure	350
1312				Incorrect use of automation - CPCS	499
1313				Incorrect or confusing / misleading ATC instructions	133
1314				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Integrity of primary aircraft structure.	341
1315				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - CPCS system and / or components	498

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1316				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Aircraft door system and / or components	391
1317				Flaws in traffic controller requirements definition process and/or training methodology	145
1318				Flaws in pilot requirements definition process and/or training methodology	168
1319				Flaws in manufacturer quality control process - CPCS system and / or components	496
1320				Flaws in manufacturer quality control process - Integrity of primary aircraft structure.	348
1321				Flaws in maintenance technician / airworthiness specialist requirements definition process and/or training methodology	149
1322				Flaws in aircraft system maintenance process definition - CPCS system and / or components	497
1323				Flaws in aircraft system maintenance process definition - Aircraft door system and / or components	392
1324				Flaws in aircraft system maintenance and airworthiness process definition - Integrity of primary aircraft structure.	345
1325				Extreme operation condition / poor maintenance quality / advanced life lenght	390
1401	ESD15	System failure affecting the operation of primary instruments / displays or standby instruments	26	Unintuitive and / or error prone system manual - Anti-icing system	397
1402		System failure affecting aircraft configuration, controllability and/or flying qualities	25	Pilot tiredness - Inadequate workload distribution	167
1403		Extreme icing conditions encounter	20	Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
1404				Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151
1405				Lack of adherence to the SOP in terms of critical indicators cross-checking	224
1406				Lack of adherence to SOP in terms of de-icing / anti-icing procedures.	232
1407				Lack of adherence to SOP in terms of aircraft icing (condition) monitoring	231
1408				Lack of adherence to AFM in terms of emergency procedures - stall recovery	292
1409				Incorrect use of automation - Anti-icing system	265
1410				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - FCS system or components	420

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1411				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Anti-icing system components	394
1412				Inadequate aircraft de-icing / anti-icing	180
1413				Flaws in pilot requirements definition process and/or training methodology	168
1414				Flaws in manufacturer quality control process - FCS system components	421
1415				Flaws in manufacturer quality control process - Anti-icing system components	395
1416				Flaws in maintenance technician / airworthiness specialist requirements definition process and/or training methodology	149
1417				Flaws in aircraft system maintenance process definition - FCS systems or components	422
1418				Flaws in aircraft system maintenance process definition - Anti-icing systems components	396
1419				Excessive pitch attitude	183
1501	ESD16	Volcanic ash encounter	22	Pilot tiredness - Inadequate workload distribution	167
1502		Vehicle driver / equipment operator / ground agent tiredness - Inadequate workload distribution	129	Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
1503		System failure affecting the operation of primary instruments / displays or standby instruments	26	Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151
1504		System failure affecting aircraft configuration, controllability and/or flying qualities	25	Lack of adherence to the SOP in terms of critical indicators cross-checking	224
1505		Flaws in vehicle driver / equipment operator / ground agent requirements definition process and/or training methodology	130	Lack of adherence to SOP in terms of pre-flight inspections -presence of anti-contamination covers on pitot static tube	398
1506		Extreme icing conditions encounter	20	Lack of adherence to SOP in terms of de-icing / anti-icing procedures.	232
1507				Lack of adherence to SOP in terms of briefing and checklist before initiating of start of taxiing and take-off	399
1508				Lack of adherence to SOP during aircraft storage and / or maintenance in terms of protecting of critical aircraft systems against contamination	233
1509				Lack of adherence to emergency procedures - recovery from severe FCS failure	338
1510				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Pitot static system components	405
1511				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - PFD	442

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1512				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - ASI	439
1513				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Anti-icing system components	394
1514				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - ADI	435
1515				Inadequate aircraft de-icing / anti-icing	180
1516				Flaws in pilot requirements definition process and/or training methodology	168
1517				Flaws in manufacturer quality control process - Pitot static system components	406
1518				Flaws in manufacturer quality control process - PFD	443
1519				Flaws in manufacturer quality control process - ASI	440
1520				Flaws in manufacturer quality control process - Anti-icing system components	395
1521				Flaws in manufacturer quality control process - ADI	436
1522				Flaws in maintenance technician / airworthiness specialist requirements definition process and/or training methodology	149
1523				Flaws in aircraft system maintenance process definition - Pitot static systems components	407
1524				Flaws in aircraft system maintenance process definition - PFD	444
1525				Flaws in aircraft system maintenance process definition - ASI	441
1526				Flaws in aircraft system maintenance process definition - Anti-icing systems components	396
1527				Flaws in aircraft system maintenance process definition - ADI	437
1528				Excessive bank angle	184
1529				Difference indications of independent aircraft speed / altitude or attitude indicators	267
1601	ESD17	Windshear encounter	21	Unintuitive and / or error prone system manual - On-board weather radar.	402
1602		Turbulence encounter	35	Traffic controller tiredness - Inadequate workload distribution	137
1603		System failure affecting aircraft configuration, controllability and/or flying qualities	25	Pilot tiredness - Inadequate workload distribution	167
1604		Frontal surface encounter	64	Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
1605		Extreme turbulence encounter	19	Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1606		Convective weather encounter	18	Lack of adherence to SOP in terms of requested information support for other aircraft in terms of adverse weather conditions	234
1607				Lack of adherence to SOP in terms of providing flight crew with current weather report	237
1608				Lack of adherence to SOP in terms of application of findings from weather report	239
1609				Lack of adherence to SOP in terms of "fasten your seat belt" information activation in passenger cabin during flight in turbulence conditions	241
1610				Lack of adherence to SARPs in terms of avoiding adverse weather conditions during flight	235
1611				Lack of adherence to emergency procedures - control recovery	448
1612				Lack of adherence of passengers to the recommendation: Fasten seat belt while seated	240
1613				Incorrect weather report obtained by the flight crew	236
1614				Incorrect use of automation - On-board weather radar	403
1615				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - On-board weather radar	445
1616				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Integrity of primary aircraft structure.	341
1617				Inadequate airline / regulatory provider policy in terms of aware of the risks related to air travel	408
1618				Flaws in traffic controller requirements definition process and/or training methodology	145
1619				Flaws in pilot requirements definition process and/or training methodology	168
1620				Flaws in manufacturer quality control process - On-board weather radar	446
1621				Flaws in manufacturer quality control process - Integrity of primary aircraft structure.	348
1622				Flaws in maintenance technician / airworthiness specialist requirements definition process and/or training methodology	149
1623				Flaws in aircraft system maintenance process definition - On-board weather radar	447
1624				Flaws in aircraft system maintenance and airworthiness process definition - Integrity of primary aircraft structure.	345

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1701	ESD18	Windshear encounter	21	Unintuitive and / or error prone system manual - Engine anti-icing system	206
1702		Wildlife incursion	5	Unintuitive and / or error prone system manual - ECAM	380
1703		Volcanic ash encounter	22	Taxiing without clearance	367
1704		Uncommanded thrust asymmetry	28	Pilot tiredness - Inadequate workload distribution	167
1705		Tire burst	80	Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
1706		System failure affecting the operation of primary instruments / displays or standby instruments	26	Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151
1707		System failure affecting aircraft configuration, controllability and/or flying qualities	25	Lack of adherence to the SOP in terms of critical indicators cross-checking	224
1708		Severe failure of all engines on transoceanic route or over rarely populated area	41	Lack of adherence to the current technology standards in terms of flight safety supporting systems. Lack of ECAM.	242
1709		Severe engine failure	42	Lack of adherence to the current technology standards in terms of flight safety and efficiency - engines location.	434
1710		Low-on-fuel condition / fuel starvation	58	Lack of adherence to SOP in terms of de-icing / anti-icing procedures.	232
1711		Inadequate fuel quality / type	37	Lack of adherence to SOP in terms of awareness on supporting systems warning	244
1712		Fuel leak	2	Lack of adherence to SOP in terms of AFM limitations	227
1713		Failures resulting in a non-standard fuel distribution	27	Lack of adherence to SARPs included in ICAO Annex 14 in terms of airport fence integrity monitoring	401
1714		Extreme turbulence encounter	19	Lack of adherence to SARPs in terms of avoiding adverse weather conditions during flight	235
1715		Extreme icing conditions encounter	20	Lack of adherence to ICAO Annex 14 SARPs. Poor or inefficient bird hazard reduction procedure	162
1716		Engine suffers severe surge	40	Lack of adherence to ICAO Annex 14 SARPs in terms of RWY mainternance - presence of contaminations.	216
1717		Engine stops during start or approach / landing	3	Lack of adherence to emergency procedures - Fuel starvation	370
1718		Engine overheating	4	Lack of adherence to AFM limitations for Take- off	202
1719		Crew is incapable in result of extreme turbulence	38	Lack of adherence to AFM in terms of emergency procedures - engine restart procedure	429
1720		Convective weather encounter	18	Lack of adherence to AFM in terms of emergency procedures - engine failure	438
1721		Convective weather - heavy rain / hail resulted with engine compressor failure	36	Incorrect use of automation -Engine anti-ice system	181
1722		Contaminated Runway	39	Inadequate de-icing method applied	159

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1723		Bird strike	34	Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Reduction gear in the engine	362
1724				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Oil distribution system	456
1725				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Landing gear components	358
1726				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Integrity of primary aircraft structure.	341
1727				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Fuel system components	352
1728				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Engine turbine components	471
1729				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Engine systems and / or components	454
1730				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Engine sensors	462
1731				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Engine fuel distribution system	449
1732				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Engine combustor	460
1733				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Engine anti-ice systems and / or components	423
1734				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Engine accessory drive components.	191

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1735				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Electrical / wiring system components	467
1736				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - ECAM (or similar) system components.	194
1737				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Compressor in the engine	186
1738				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Components of Wing control surface system.	288
1739				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - APU systems and / or components	464
1740				Inadequate aircraft de-icing / anti-icing	180
1741				Flaws in pilot requirements definition process and/or training methodology	168
1742				Flaws in manufacturer quality control process - Reduction gear in the engine.	363
1743				Flaws in manufacturer quality control process - Oil distribution system	457
1744				Flaws in manufacturer quality control process - Landing gear components.	376
1745				Flaws in manufacturer quality control process - Engine turbine components	472
1746				Flaws in manufacturer quality control process - Engine systems and / or components	458

1763				Flaws in aircraft system maintenance process definition - Fuel system components	361
1764				Flaws in aircraft system maintenance process definition - Engine turbine components	470
1765				Flaws in aircraft system maintenance process definition - Engine systems and / or components	463
1766				Flaws in aircraft system maintenance process definition - Engine sensors	453
1767				Flaws in aircraft system maintenance process definition - Engine fuel distribution system	451
1768				Flaws in aircraft system maintenance process definition - Engine combustor	459
1769				Flaws in aircraft system maintenance process definition - Engine anti-ice system and / or components	428
1770				Flaws in aircraft system maintenance process definition - Engine accessory drive components.	190
1771				Flaws in aircraft system maintenance process definition - Electrical wiring System	252
1772				Flaws in aircraft system maintenance process definition - ECAM (or similar) system components.	195
1773				Flaws in aircraft system maintenance process definition - Compressor in the engine.	188
1774				Flaws in aircraft system maintenance process definition - Components of Wing control surface system.	311
1775				Flaws in aircraft system maintenance process definition - APU systems and / or components	466
1776				Flaws in aircraft system maintenance and airworthiness process definition - Integrity of primary aircraft structure.	345
1777				Error in calculation of necessary amount of fuel	243
1778				Aggressive maneuvering / overcontrolling	182

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1801	ESD19	Vehicle driver / equipment operator / ground agent tiredness - Inadequate workload distribution	129	Unstabilized final approach (high, fast, steep,)	416
1802		System failures that may affect braking devices (ground spoilers, brakes / autobrake, thrust reversers)	15	Unintuitive and / or error prone system manual - FMS	494
1803		System failure affecting the operation of primary instruments / displays or standby instruments	26	Pilot tiredness - Inadequate workload distribution	167
1804		Severe structural failure of aircraft or / and its critical systems resulted from design load exceeding during touchdown	49	Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
1805		Missed approach execution necessary after prolonged flight due to e. g. extreme weather	44	Late thrust reduction or power-on touchdown	176
1806		Hard landing	47	Late deceleration and configuration set-up for approach and landing	414
1807		Gross loading error	16	Late activation of pedal braking or takeover from autobrake, when so required	174
1808		Flaws in vehicle driver / equipment operator / ground agent requirements definition process and/or training methodology	130	Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151
1809		Failures resulting in a non-standard fuel distribution	27	Lack of adherence to the main CRM rules	264
1810		Deep (long) landing	119	Lack of adherence to the current technology standards in terms of flight safety supporting systems. Lack of ILS on descent path	248
1811		Crew is incapable in result of shock related to hard landing	103	Lack of adherence to the current technology standards in terms of flight safety and efficiency - fuel tank allocation.	256
1812		Convective weather encounter	18	Lack of adherence to SOP in terms of pre-flight inspections - cargo securing quality	431
1813		Convective weather / turbulence / windshear or crosswind conditions during take-off	32	Lack of adherence to SOP in terms of necessary amount of fuel	254
1814		Continued unstabilized approach (failure to comply with go-around criteria and policy)	13	Lack of adherence to SOP in terms of load sheet preparation and verification	255
1815		Cargo loading unsecured / shift	17	Lack of adherence to SOP in terms of briefing and checklist before initiating of approach and landing	246
1816		Bounced landing	118	Lack of adherence to SOP in terms of approach and landing	245
1817		AOA prevents missed approach	14	Lack of adherence to SOP in terms of AFM limitations in terms of weigh and balance	257
1818		Adverse weather in terms of heavy rain or icing conditions resulted with decreased RWY surface friction rate	45	Lack of adherence to SARPs included in Annex 14 and related documents in terms of temporary suspension of operation on airport inthe case of adverse weather.	249
1819		Adverse weather / poor visibility conditions / darkness	6	Lack of adherence to SARPs included in Annex 14 and related documents in terms of RWY parameters and location, approach path parameters and obstacles locations.	295
1820				Lack of adherence to emergency procedures - control recovery	448

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1821				Lack of adherence to AIR OPS normal procedures in terms of missed approach execution procedure	250
1822				Lack of adherence to AFM limitations for Take- off	202
1823				Lack of adherence to AFM limitations for landing	251
1824				Lack of adherence to AFM in terms of emergency procedures - stall recovery	292
1825				Incorrect use of automation - FMS	269
1826				Inappropriate selection of autobrake mode for given runway length and condition	178
1827				Inadequate maintenance of RWY. Lack of adherence to ICAO Annex 14 in terms of RWY surface condition. Snow / ice presence / or runway surface friction rate below minimum	203
1828				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Landing gear components	358
1829				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Engine fuel distribution system	449
1830				High energy approach due to lack of adequate planning or due to challenging design of STAR (high fix-crossing-altitudes,) or challenging ATC instructions (late descent, vectors, altitude or speed restrictions,)	413
1831				Go-around attempt after thrust reversers deployment	193
1832				Flaws in pilot requirements definition process and/or training methodology	168
1833				Flaws in manufacturer quality control process - Landing gear components.	376
1834				Flaws in manufacturer quality control process - Engine fuel distribution system	450
1835				Flaws in maintenance technician / airworthiness specialist requirements definition process and/or training methodology	149
1836				Flaws in CRM training procedures	263
1837				Flaws in aircraft system maintenance process definition - Landing gear components.	377
1838				Flaws in aircraft system maintenance process definition - Engine fuel distribution system	451
1839				Failure to arm ground-spoilers	177
1840				Error in calculation of necessary amount of fuel	243
1841				DME / ILS DME confusion in assessing the final descent point / FAF	415
1842				Descent above desired descent profile	412
1843				Delayed selection of reverse thrust	175

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
1844				Aggressive maneuvering / overcontrolling	182
1901	ESD21	System failures that may affect braking devices (ground spoilers, brakes / autobrake, thrust reversers)	15	Unstabilized final approach (high, fast, steep,)	416
1902		System failure affecting the operation of primary instruments / displays or standby instruments	26	Unintuitive and / or error prone system manual - FMS	494
1903		Severe structural failure of aircraft or / and its critical systems resulted from design load exceeding during touchdown	49	Pilot tiredness - Inadequate workload distribution	167
1904		Missed approach execution necessary after prolonged flight due to e. g. extreme weather	44	Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
1905		Hard landing	47	Late thrust reduction or power-on touchdown	176
1906		Deep (long) landing	119	Late deceleration and configuration set-up for approach and landing	414
1907		Crew is incapable in result of shock related to hard landing	103	Late activation of pedal braking or takeover from autobrake, when so required	174
1908		Convective weather encounter	18	Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151
1909		Convective weather / turbulence / windshear or crosswind conditions during take-off	32	Lack of adherence to the main CRM rules	264
1910		Continued unstabilized approach (failure to comply with go-around criteria and policy)	13	Lack of adherence to the current technology standards in terms of flight safety supporting systems. Lack of ILS on descent path	248
1911		Bounced landing	118	Lack of adherence to SOP in terms of necessary amount of fuel	254
1912		AOA prevents missed approach	14	Lack of adherence to SOP in terms of briefing and checklist before initiating of approach and landing	246
1913		Adverse weather in terms of heavy rain or icing conditions resulted with decreased RWY surface friction rate	45	Lack of adherence to SOP in terms of approach and landing	245
1914		Adverse weather / poor visibility conditions / darkness	6	Lack of adherence to SOP for approach and landing	247
1915				Lack of adherence to SARPs included in Annex 14 and related documents in terms of temporary suspension of operation on airport inthe case of adverse weather.	249

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
3001	ESD35	System failure affecting the operation of primary instruments / displays or standby instruments	26	Use of non-standard phraseology by pilot and/or controller	134
3002		Prolonged loss of communications (PLOC) between pilot and controller(s)	53	Unintuitive and / or error prone system manual - FMS	494
3003		Natural or artificial obstacle on runway course	60	Traffic controller tiredness - Inadequate workload distribution	137
3004		MSAW warning	51	Premature descent to DA(H) before G/S intercept or premature descent to MDA(H) before final-descent-point / FAF	281
3005		Inadequate NOTAM information concerning ground navigational aid failure	68	Premature descent below MDA(H) before reaching the visual-descent-point (VDP)	282
3006		Inadequate navigational chart	69	Pilot tiredness - Inadequate workload distribution	167
3007		Ground Navigational Aid failure	62	Not recognized ground Navaids System failure not reflected in NOTAM messages	308
3008		GPWS / TAWS alert / warning (genuine or spurious)	50	Maintenance technician / airworthiness specialist tiredness - Inadequate workload distribution	150
3009		Error in preparation of database for FMS	61	Late or inadequate response to MSAW warning	286
3010		Adverse weather / poor visibility conditions / darkness	6	Lack of or poor communication quality	146
3011				Lack of English proficiency	132
3012				Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151
3013				Lack of adherence to the SOP in terms of critical indicators cross-checking	224
3014				Lack of adherence to the main CRM rules	264
3015				Lack of adherence to the current technology standards in terms of flight safety supporting systems. Lack of MSAW system.	302
3016				Lack of adherence to the current technology standards in terms of flight safety supporting systems. Lack of GPWS	293
3017				Lack of adherence to SOP. Lack of awareness and immidiate answer on supporting systems warning. Navigational aid failure.	303
3018				Lack of adherence to SOP. Lack of awareness and immidiate answer on supporting systems warning. MSAW warning.	495
3019				Lack of adherence to SOP in terms of communication between ATC and pilot / vehicle driver	148
3020				Lack of adherence to SOP in terms of approach and landing	245
3021				Lack of adherence to SOP for AIR operations in terms of controller error in approach clearence instruction	307
3022				Lack of adherence to SOP during aircraft storage and / or maintenance in terms of protecting of critical aircraft systems against contamination	233

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.
3023				Lack of adherence to SARPs included in Annex 14 and related documents in terms of RWY parameters and location, attitude, approach path parameters and obstacles locations (e.g. mountains).	225
3024				Lack of adherence to SARPs included in Annex 14 and related documents in terms of RWY parameters and location, approach path parameters and obstacles locations.	295
3025				Incorrect use of automation - FMS	269
3026				Incorrect or inappropriate radar vectoring by ATC (i.e., below MVA and/or toward high terrain)	278
3027				Incorrect or confusing / misleading ATC instructions	133
3028				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Onboard navigational systems and components.	492
3029				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - MSAW System	411
3030				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - Ground navigational systems and components (e.g. ILS)	489
3031				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - GPWS system components	486
3032				Inadequate certification process and / or flaws in methodology concerning verification of the system / product compliance with requirements - FMS subsystems and components (autopilot incl.)	299
3033				Imbalanced and inaproppriate relation between cpt and his subordinates	304
3034				Flight below desired flight path during initial and/or final approach	283
3035				Flaws in traffic controller requirements definition process and/or training methodology	145
3036				Flaws in pilot requirements definition process and/or training methodology	168
3037				Flaws in manufacturer quality control process - Onboard navigational systems and components.	493
3038				Flaws in manufacturer quality control process - Ground navigational systems and components (e.g. ILS)	490

	ESD	Occurrences (Uneventful Events)	No.	Deviations (Procedural/Flight Path)	No.

	Base events	Code	Definition	Identifiable precursors	No.
D 35	Base events	Code	Definition	Identifiable precursors	No.
	Flight crew decision error /operation of equipment error			Flight crew decision error /operation of equipment error	
		AL35F5211	Given a manual trajectory command during approach, an incorrect trajectory command (ITC) is executed due to ground navigational aid failure. This comprises ILS and navigational beacon failures not recognised by flight crew. It includes failures of NOTAM information to warn the flight crew about navaid problems.	Ground Navigational Aid failure	62
				Inadequate NOTAM information concerning ground navigational aid failure	68
				Traffic controller tiredness - Inadequate workload distribution	137
					145
				Flaws in maintenance technician / airworthiness specialist requirements definition	149
				process and/or training methodology	143
					150
				Not recognized ground Navaids System failure not reflected in NOTAM messages	308
				Flaws in aircraft system maintenance process definition - Ground navigational systems	488
				of the system / product compliance with requirements - Ground navigational systems	489
				and components (e.g. ILS)	
					490
		AL35F5212	Given a manual trajectory command during approach, an ITC is executed due to on-board navigational equipment failure. This comprises failures in the navigational receivers not recognised by flight crew. It may include lack of awareness of equipment failure modes.	System failure affecting the operation of primary instruments / displays or standby instruments	26
					149
				Maintenance technician / airworthiness specialist tiredness - Inadequate workload	15-
				distribution	150
					151
					167
				Flaws in pilot requirements definition process and/or training methodology	168
				Lack of adherence to the SOP in terms of critical indicators cross-checking	224
					303
				systems and components	491
				of the system / product compliance with requirements - Onboard navigational	492
				Flaws in manufacturer quality control process - Onboard navigational systems and	493
	Inadequate charts cause ITC	AL35F5213	Given a manual trajectory command during approach, an ITC is executed due to inadequate charts. This comprises ITC primarily caused by inadequacies in the approach procedures or on-board navigational charts.	Inadequate navigational chart	69
			· ·	Pilot tiredness - Inadequate workload distribution	167
				Flaws in pilot requirements definition process and/or training methodology	168
	Incorrect ATC clearance causes ITC	AL35F5214	Given a manual trajectory command during approach, ITC is executed due to incorrect ATC clearances. This only covers cases where incorrect clearances directly cause the pilot to command	Flaws in aircraft system maintenance process definition - stickshaker	245 136
			Tilgnt towards terrain.	Flaws in traffic controller requirements definition process and/or training methodology	145
				Lack of adherence to SOP for AIR operations in terms of controller error in approach clearence instruction	307
	Data interpretation by pilot causes ITC	AL35F522	Given a manual trajectory command during approach by a pilot in possession of the necessary data, of ITC due to incorrect interpretation of the data. This covers incorrect interpretation of navaids and ATC clearances.	Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring or / and passive contribution to the PF duties	151
				Pilot tiredness - Inadequate workload distribution	167 168
					245
	Misjudgement by pilot causes ITC	AL35F523	Given a manual trajectory command during approach by a pilot having understood the necessary data, ITC is executed due to misjudgement of terrain separation.	Adverse weather / poor visibility conditions / darkness	6
				Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring	151
				or / and passive contribution to the PF duties Pilot tiredness - Inadequate workload distribution	167
				Flaws in pilot requirements definition process and/or training methodology	168
			1	Lack of adherence to SARPs included in Annex 14 and related documents in terms of	
				RWY parameters and location, attitude, approach path parameters and obstacles locations (e.g. mountains).	225
	Violation of procedures by pilot causes	AL35F524	Given a manual trajectory command during approach by a pilot having understood the necessary data, an ITC is executed due to	locations (e.g. mountains). Altimeter setting error	225 274 167
	Violation of procedures by pilot causes ITC	AL35F524	Given a manual trajectory command during approach by a pilot having understood the necessary data, an ITC is executed due to deliberate violation of terrain separation standards.	locations (e.g. mountains). Altimeter setting error Pilot tiredness - Inadequate workload distribution	274 167
		AL35F524	having understood the necessary data, an ITC is executed due to	locations (e.g. mountains). Altimeter setting error Pilot tiredness - Inadequate workload distribution Flaws in pilot requirements definition process and/or training methodology	274 167 168
	ITC		having understood the necessary data, an ITC is executed due to deliberate violation of terrain separation standards.	locations (e.g. mountains). Altimeter setting error Pilot tiredness - Inadequate workload distribution Flaws in pilot requirements definition process and/or training methodology Lack of adherence to SOP in terms of approach and landing	274 167 168 245
		AL35F524 AL35F53	having understood the necessary data, an ITC is executed due to	locations (e.g. mountains). Altimeter setting error Pilot tiredness - Inadequate workload distribution Flaws in pilot requirements definition process and/or training methodology	274 167 168
		Ground navaid failure causes ITC On-board nav equipment failure causes ITC Inadequate charts cause ITC Incorrect ATC clearance causes ITC Data interpretation by pilot causes ITC	Ground navaid failure causes ITC AL35F5211 On-board nav equipment failure causes ITC AL35F5212 Inadequate charts cause ITC AL35F5213 Incorrect ATC clearance causes ITC AL35F5214 Data interpretation by pilot causes ITC AL35F522	Given a manual trajectory command during approach, an incorrect trajectory command (III) is executed due to ground navagational actor failures not recognised by flight crew. It includes failures of NOTAM information to warn the flight crew about naval problems. On-board nav equipment failure causes ITC On-board nav equipment failure causes ITC AL36F5212 Given a manual trajectory command during approach, an ITC is executed due to on-board navigational equipment failure. This comprises failures in the navigational receivers not recognised by flight crew. It may include lack of awareness of equipment failure modes. Given a manual trajectory command during approach, an ITC is executed due to on-board navigational receivers not recognised by flight crew. It may include lack of awareness of equipment failure modes. Given a manual trajectory command during approach, an ITC is executed due to inadequate that This comprises ITC primarily caused by madequactes in the approach procedures or on-board navigational charts. Given a manual trajectory command during approach, an ITC is executed due to incorrect ATC clearance. This only comprises ITC primarily caused by madequactes in the approach procedures or on-board navigational charts. Given a manual trajectory command during approach, an ITC is executed due to incorrect ATC clearance. This only covers cases where incorrect clearances directly cause the pilot to command flight towards terrain. Given a manual trajectory command during approach by a pilot in possession of the necessary data, of ITC due to incorrect interpretation of navadis and ATC clearances.	Ground revoid failure causes ITC A 157311 A

		Base events	Code	Definition	Identifiable precursors	No.
1	9	Ground navaid failure causes ITC	AL35F6211	Given an FMS trajectory command during approach, an ITC is executed due to ground navigational aid failure. This comprises ILS and navigational beacon failures not recognised by flight crew or FMS. It includes failures of NOTAM information to warn the flight crew about navaid problems. 	Base events	Code	Definition	Identifiable precursors	No.
				Lack of adherence to SARPs included in Annex 14 and related documents in terms of	
30				RWY parameters and location, attitude, approach path parameters and obstacles locations (e.g. mountains).	225
31					245
33					269
34 35				Altimeter setting error Failure to check navigation accuracy before approach	274 275
33				Inadequate certification process and / or flaws in methodology concerning verification	2/3
36				of the system / product compliance with requirements - FMS subsystems and	299
				components (autopilot incl.)	
37				Lack of adherence to SOP. Lack of awareness and immidiate answer on supporting systems warning. Navigational aid failure.	303
20				Flaws in manufacturer quality control process - FMS subsystem and components	200
38				(autopilot incl.)	306
39				Lack of adherence to SOP for AIR operations in terms of controller error in approach clearence instruction	307
40					308
41				Flaws in aircraft system maintenance process definition - FMS subsystems and	410
41				components (autopilot incl.)	410
42				Flaws in aircraft system maintenance process definition - Ground navigational systems and components (e.g. ILS)	488
				Inadequate certification process and / or flaws in methodology concerning verification	
43					489
				and components (e.g. ILS)	
44				Flaws in manufacturer quality control process - Ground navigational systems and components (e.g. ILS)	490
				Flaws in aircraft system maintenance process definition - Onboard navigational	
45				systems and components	491
46				Inadequate certification process and / or flaws in methodology concerning verification	402
46				of the system / product compliance with requirements - Onboard navigational systems and components.	492
				Flaws in manufacturer quality control process - Onboard navigational systems and	
47				components.	493
48			a: strain and a district	Unintuitive and / or error prone system manual - FMS	494
1 30	PNF superior and sil	nt AL35B432	Given an FTTC, the PNF recognises the error, but fails to communicate this in order to test or train the PF.	Pilot tiredness - Inadequate workload distribution	167
2			communicate this in order to test of train the FF.	Flaws in pilot requirements definition process and/or training methodology	168
3				Lack of adherence to SOP in terms of approach and landing	245
4				Flaws in CRM training procedures	263
6				Lack of adherence to the main CRM rules Adverse weather / poor visibility conditions / darkness	264 6
				System failure affecting the operation of primary instruments / displays or standby	
7				instruments	26
8					50
9 10				MSAW warning Prolonged loss of communications (PLOC) between pilot and controller(s)	51 53
11					61
12					62
13			_		68
15					69 132
16				Lack of adherence to SOP during aircraft storage and / or maintenance in terms of	233
				protecting of critical aircraft systems against contamination	
17 18					134 137
19				Flaws in traffic controller requirements definition process and/or training	145
				methodology	
20				Lack of or poor communication quality Lack of adherence to SOP in terms of communication between ATC and pilot / vehicle	146
21				driver	148

	42						493

		Base events	Code	Definition	Identifiable precursors	No.
44					Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring	151
45					or / and passive contribution to the PF duties Pilot tiredness - Inadequate workload distribution	167
46					Flaws in pilot requirements definition process and/or training methodology	168
47					Lack of adherence to SOP in terms of approach and landing	245
48 49					Flaws in CRM training procedures Lack of adherence to the main CRM rules	263 264
50					Imbalanced and inaproppriate relation between cpt and his subordinates	304
	43	MSAW failure to give warning in time	AL35B3222	Given a CFTT with TAR and MSAW available, MSAW does not give a	Inadequate certification process and / or flaws in methodology concerning verification	411
2				warning in time to be able to prevent an imminent CFIT.	of the system / product compliance with requirements - MSAW System	6
					Adverse weather / poor visibility conditions / darkness System failure affecting the operation of primary instruments / displays or standby	
3					instruments	26
5					GPWS / TAWS alert / warning (genuine or spurious)	50
6					MSAW warning Prolonged loss of communications (PLOC) between pilot and controller(s)	51 53
7					Error in preparation of database for FMS	61
8					Ground Navigational Aid failure	62
10					Inadequate NOTAM information concerning ground navigational aid failure Inadequate navigational chart	68 69
11					Lack of English proficiency	132
12					Lack of adherence to SOP during aircraft storage and / or maintenance in terms of	233
13					protecting of critical aircraft systems against contamination Use of non-standard phraseology by pilot and/or controller	134
14					Traffic controller tiredness - Inadequate workload distribution	137
15					Flaws in traffic controller requirements definition process and/or training	145
16					methodology Lack of or poor communication quality	146
					Lack of adherence to SOP in terms of communication between ATC and pilot / vehicle	1
17					driver	148
18					Flaws in maintenance technician / airworthiness specialist requirements definition	149
Н					process and/or training methodology Maintenance technician / airworthiness specialist tiredness - Inadequate workload	+-
19					distribution	150
20					Lack of adherence to the SOP in terms of PNF flight parameters / situation monitoring	151
21					or / and passive contribution to the PF duties Current airport diagram not reflecting critical changes	155
22					Pilot tiredness - Inadequate workload distribution	167
23					Flaws in pilot requirements definition process and/or training methodology	168
24					Lack of adherence to the SOP in terms of critical indicators cross-checking Lack of adherence to SARPs included in Annex 14 and related documents in terms of	224
25					RWY parameters and location, attitude, approach path parameters and obstacles	225
					locations (e.g. mountains).	
26 28					Lack of adherence to SOP in terms of approach and landing Incorrect use of automation - FMS	245 269
29					Altimeter setting error	274
30					Failure to check navigation accuracy before approach	275
31					Inadequate certification process and / or flaws in methodology concerning verification	
31					of the system / product compliance with requirements - FMS subsystems and components (autopilot incl.)	299
32					Lack of adherence to SOP. Lack of awareness and immidiate answer on supporting	303
32					systems warning. Navigational aid failure.	303
33					Flaws in manufacturer quality control process - FMS subsystem and components (autopilot incl.)	306
24					Lack of adherence to SOP for AIR operations in terms of controller error in approach	307
34					clearence instruction	_
35					Not recognized ground Navaids System failure not reflected in NOTAM messages Flaws in aircraft system maintenance process definition - FMS subsystems and	308
36					components (autopilot incl.)	410
